

Student Score Filler

Guide for loading the extension into Chrome and using it to fill student scores.

Developed by Dr. Ayman Al-Ani

1. What This Extension Does

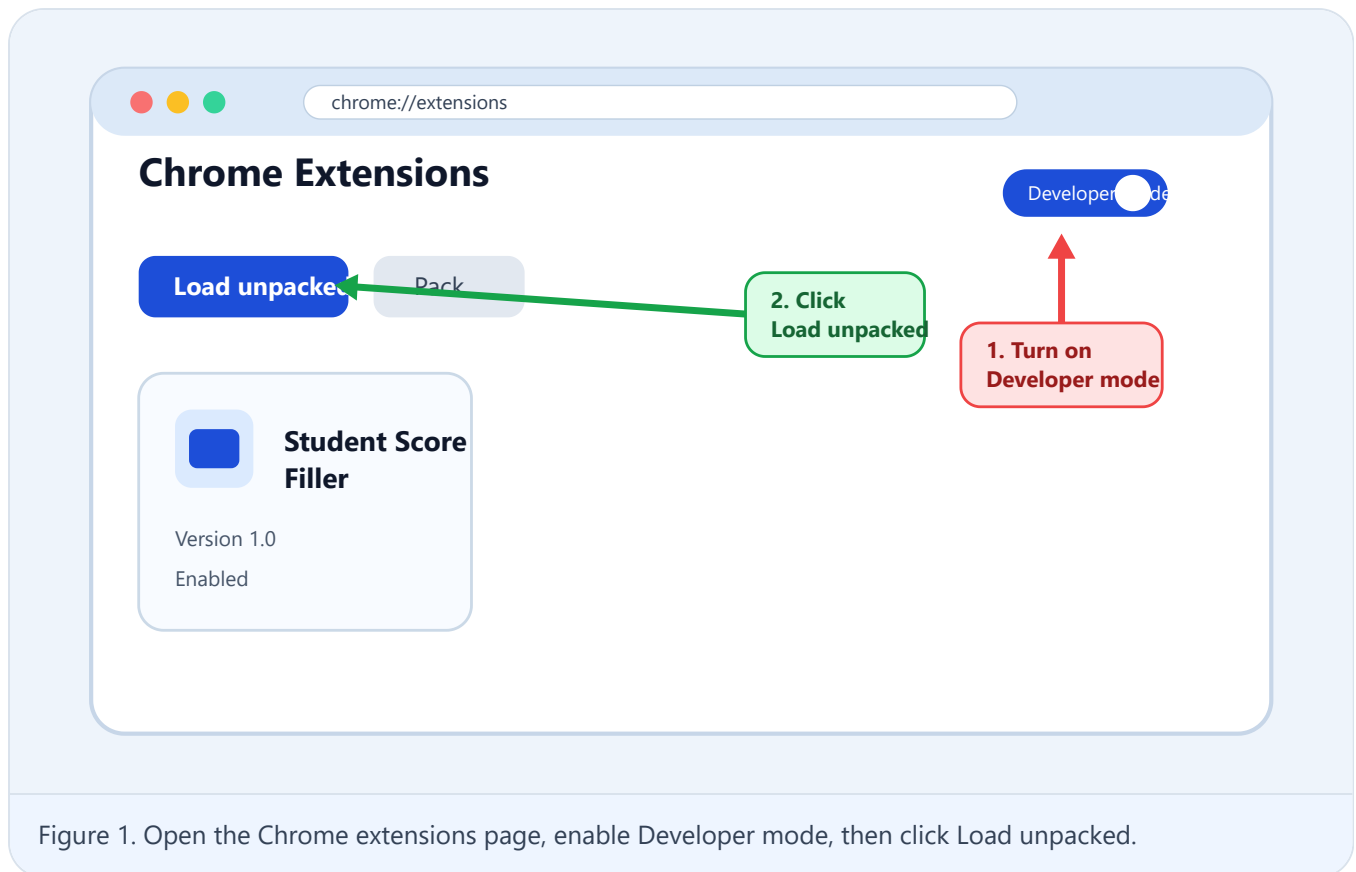

This extension helps you fill student marks on a web page automatically.

- It reads a CSV file that contains student IDs and scores.
- It matches each student ID from the file with the student ID shown on the page.
- It fills the score input box for each matched student.
- It can also set the same reason code for all students.

2. How To Load The Extension Into Chrome

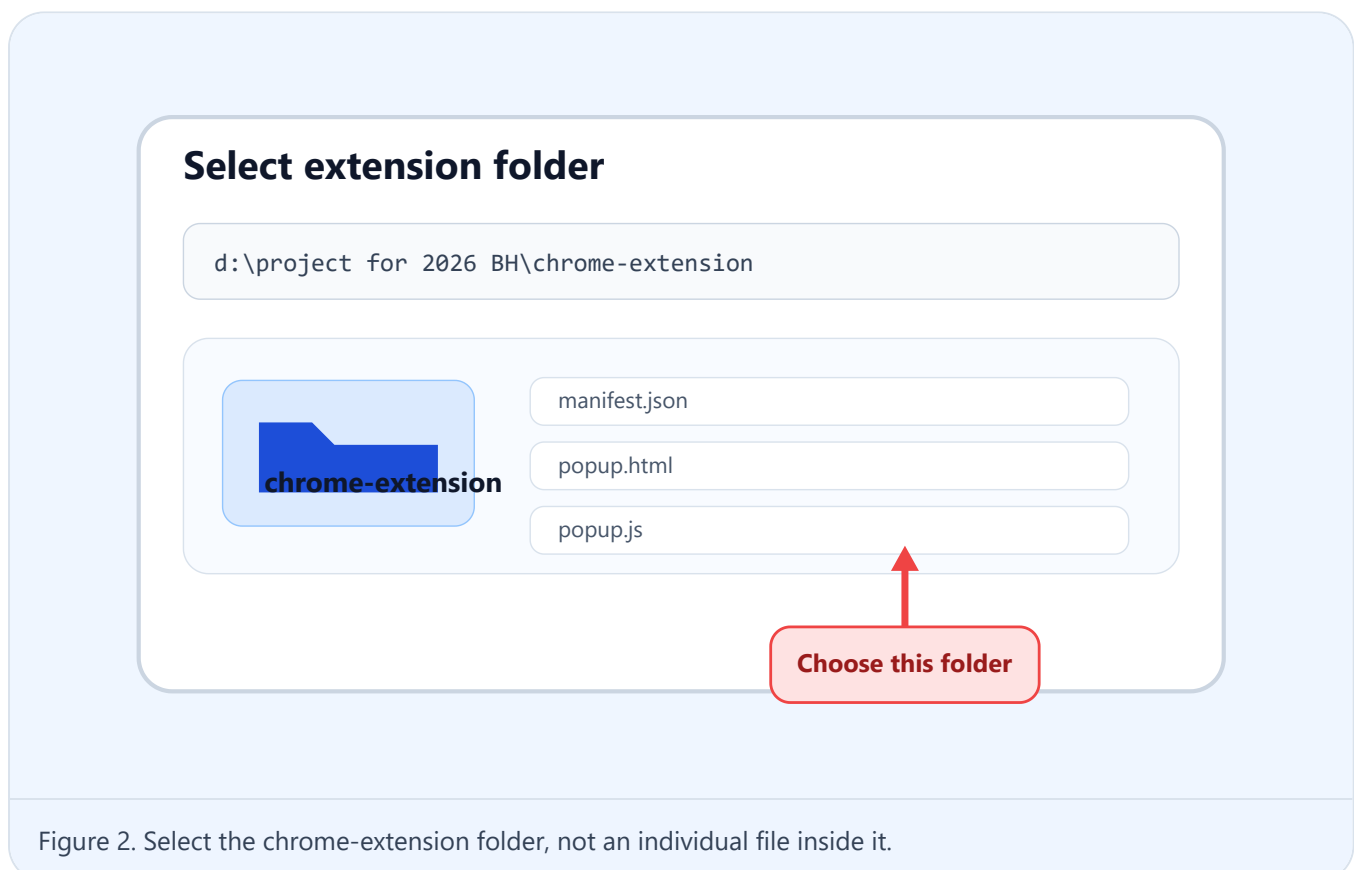

Step 1: Open the Extensions Page

Open Chrome and go to **chrome://extensions**.

Step 2: Select the Extension Folder

After clicking **Load unpacked**, choose the **chrome-extension** folder from your computer.

Example folder to choose:

```
d:\project for 2026 BH\chrome-extension
```

Step 3: Pin the Extension

Click the puzzle icon in Chrome, then pin **Student Score Filler** so it is easy to open later.

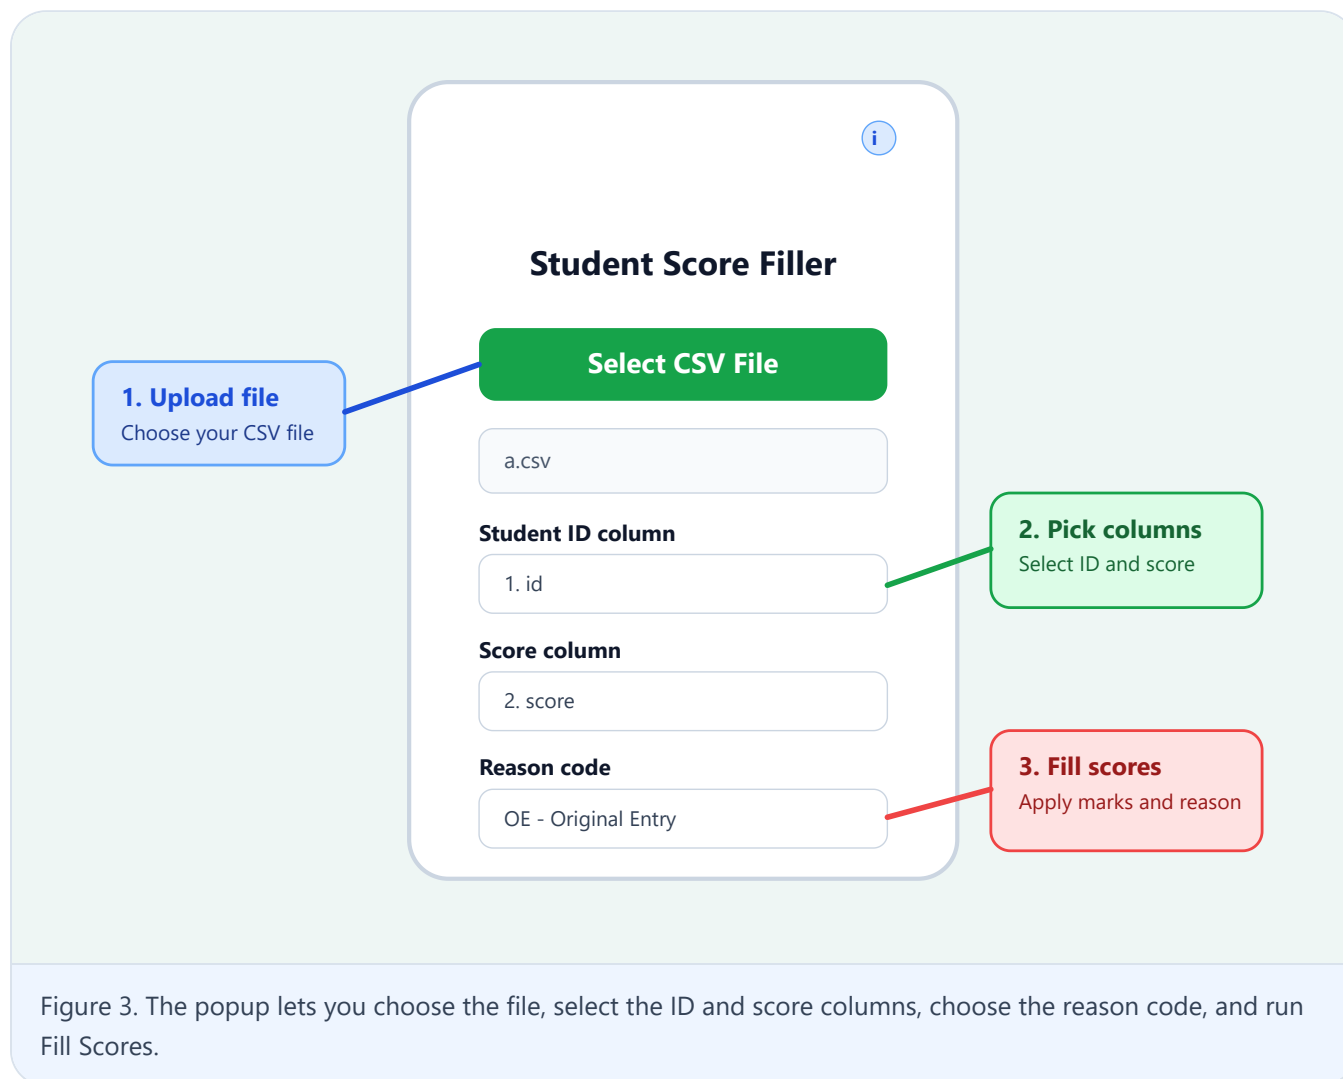

3. How To Use The Extension

Step 1: Open the Marks Page

Open the web page that contains the student table and the score input boxes.

Step 2: Open the Extension Popup

Click the Student Score Filler icon in Chrome.

Step 3: Select the CSV File

Click **Select CSV File** and choose your file.

Example CSV content:

```
id,score
202303387,92.14
```

202303552, 85.71

202302918, 73.81

Step 4: Choose the Correct Columns

After the file is loaded, choose:

- The column that contains the student ID
- The column that contains the score

If the file came from Excel and has more than two columns, this step lets you select the correct ones.

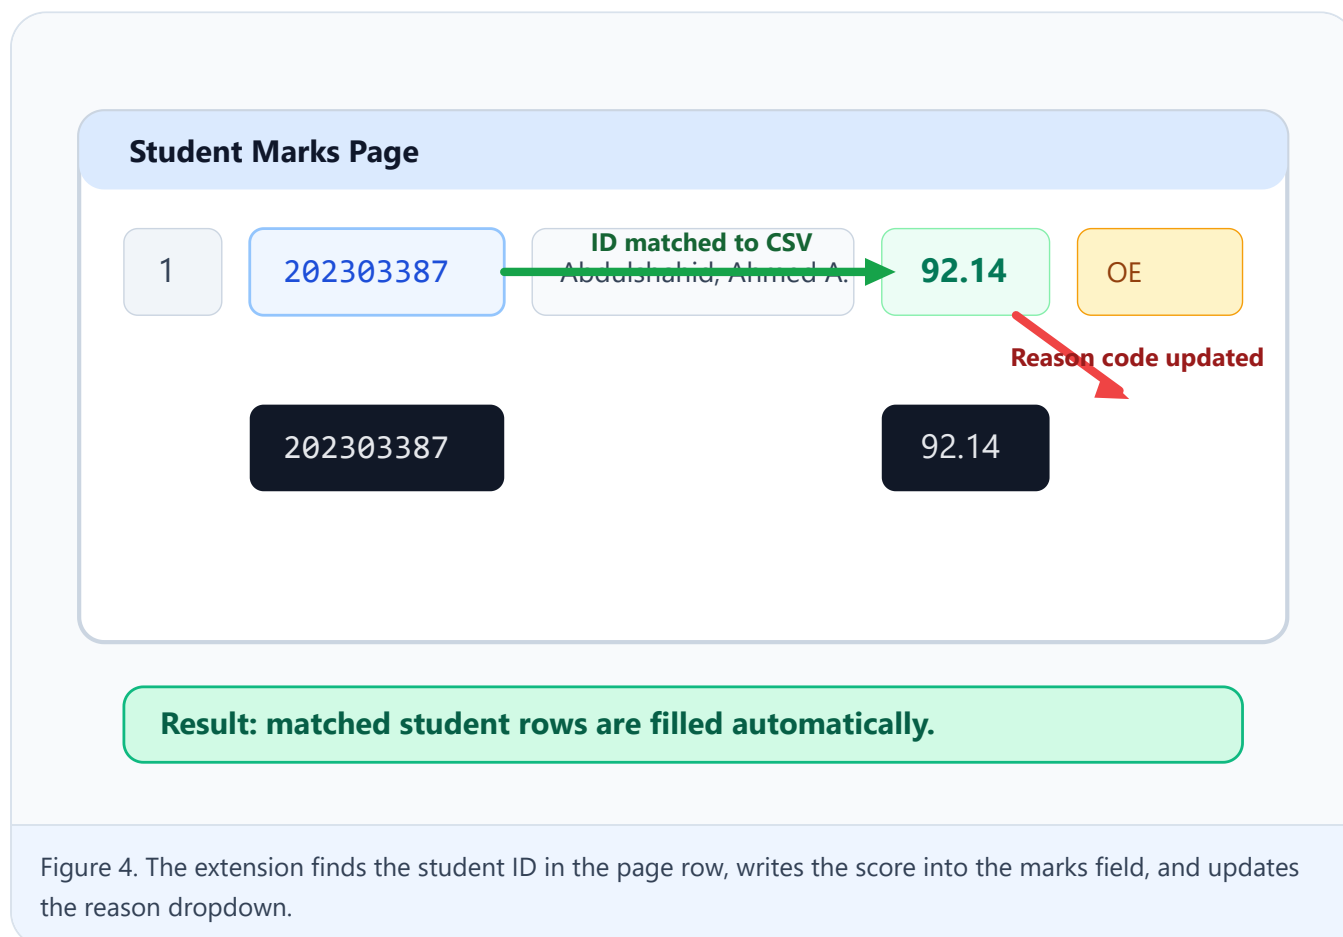

Step 5: Choose the Reason Code

Select one reason code. The extension will apply this code to all students on the page.

Step 6: Click Fill Scores

The extension will fill matched students automatically and then show a result message.

4. What Happens On The Page

When the extension runs:

- It scans the table rows on the page.
- It compares each row's student ID with the IDs in the CSV file.
- For each match, it fills the score input box.
- It also changes all reason-code dropdowns to the selected value.

5. Troubleshooting

The file loads, but no rows appear

Check that the first row contains column names and that you selected the correct ID and score columns.

Some students are not filled

This usually means those student IDs were not found on the current page.

The extension does not appear in Chrome

Go back to `chrome://extensions`, make sure Developer mode is enabled, and reload the extension.

The popup options are hidden

The ID column, score column, and reason code options appear only after a file is selected.
